## **New DSC DVACS®\* Internet Alarm Communicator Uses Internet to Save Money and Facilitate Quicker Response Times**

*T-Link TL250D module takes advantage of end-users' existing broadband connections to transmit alarm system information*

**CONCORD, ON, Canada, March 22, 2005** – DSC, part of Tyco Fire and Security, a leading provider of intrusion security products worldwide, expects central monitoring stations to increase their internal efficiencies and save on equipment costs with the installation of its new DVACS Internet alarm communicator, the T-Link TL250D.

The module works by communicating alarm system information over the Internet instead of the dedicated DVACS communication circuit. DVACS is commonly used in Canadian commercial applications to communicate with a central monitoring station receiver. Integrators simply go to any existing Sur-Gard™ DVACS control panel or existing DSC DVACS module and replace DVACS communication with existing broadband communication.

Almost all commercial, business and retail clients can take advantage of their existing broadband service. The fact that you simply add the TL250D without having to upgrade the control equipment means minimal up-front cost. Finally, there is a ULC-listed alternative to the ever-increasing cost of DVACS lines.

For more information about the TL250D Internet alarm communicator visit [www.dsc.com](http://www.dsc.com).
